

e-Learning Vision

Glendal envisages an environment where the use of information and communications technology (ICT) is regarded as an integral part of our everyday practices. To support this vision each classroom is equipped with a bank of computers, most classrooms include an interactive whiteboard and the computer room facilitates whole class teaching of specific skills.

Our aim is to:

- Enhance learning outcomes, including levels of achievement, engagement, motivation and understanding.
- Use e-learning to further enhance our philosophy of providing a differentiated curriculum to our students.
- Use the most advanced educational techniques and computer resources to significantly improve teaching and learning.
- Provide our students with the necessary communication technology skills that will equip them for future employment in a rapidly changing global environment.
- Continually provide staff with professional development opportunities to improve their teaching practice and communication technology skills.
- Use e-learning in curriculum planning, implementation, reporting and assessment.
- Provide the school community access to school based information and documents via the intranet and website.
- Improve the skill level of staff and students in all forms of e-learning technology.
- Extend learning beyond the classroom, to include resources and collaborators, both local and global.
- Ensure that e-learning is utilized across all Key Learning Areas.
- To provide all classrooms with sufficient resources to fully utilize e-learning for collaborative group work.
